Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-25 and 30-25, drawn to quadrature amplitude modulation, classified in class 375, subclass 298.
 - II. Claims 26-29 and 36-40, drawn to controlling and selection a mode of operation in a modem, classified in class 375, subclass 222.
2. Inventions I and II are directed to related quadrature amplitude modulation. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the inventions are distinct, each from the other because of the following reasons: Group I refers to the acquisition of a quadrature amplitude modulated signal by performing numerous operations such as automatic gain control and decision directed equalization. Group II refers controlling the operation of a QAM modem and selecting a mode of operation in a modem based on the state of the modem.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
